Book and Survey Editor: **D.N.P. Murthy**, Department of Mechanical Engineering, University of Queensland, St Lucia, Brisbane, Qld 4067, Australia. murthy@mech.uq.edu.au

Editorial Assistant: **Christee Zimmermann**, Department of Systems Science and Mathematics, Campus Box 1040, Washington University, One Brookings Drive, St Louis, MO 63130-4899, U.S.A.

Advice to Authors

The readers of our Journal may notice that the time difference between the earliest "Received" date and the latest date of any article in a given issue may be more than a year. What causes such differences, and how can you, a prospective author, be assured of a very speedy publication?

Every high quality scientific journal has the very natural desire to publish only first class, quality works. In the case of many journals, that is the only, perfectly reasonable and appropriate, objective. However, there exist quite a few scientific endeavors today, for which the speed of publication also plays a very important role. I believe that our field, dealing with the applications of mathematics and computers, is definitely a member of the latter group. An easy solution to the achievement of speedy publication is the utilization of an author prepared electronic version.

In this journal, we are trying to perform a triple-objective optimization:

- (a) to publish works of the highest quality;
- (b) to publish them speedily;
- (c) to have them typeset uniformly.

If you are a prospective author, you can help speed your paper towards publication in the following ways:

1. In order to insure quality, all published papers are refereed carefully. Please be sure to select that Editor from our Board whose interests are closest to the subject of your paper. We require that each manuscript be accompanied by a list of 6 to 8 potential referees (non-editorial board members, please) including current addresses. In many cases, that Editor will be willing to review your work himself, availing himself of perhaps only one more referee—a speedy process. However, if you send it to just anyone on our Board, it may take some time before that person even finds appropriate referees—not all of whom are willing to do a fast enough review of your paper, thus causing the first major delay.

2. After a paper is accepted, it has to be typeset, unless that job was already done by you and/or by your secretary. **We typeset all of our papers in AMST_EX, amsp_st.sty "style file."** That is how we achieve uniformity. Therefore, the best that you can do is this: submit to us, on a diskette or via e-mail, such a T_EX version of your work. In all likelihood, it will be printed in the next available issue, because you will not need to have a galley proof! The second best option is to provide us with a L^AT_EX or any other T_EX file, for then you are again helping considerably; our work is minimized. In most such instances, authors also do not need to receive galley proofs. We send them only if there are major departures from your original format.

3. The third "speedup" option is to provide us with any electronic version of your manuscript—such as Microsoft Word. In this case, you will receive galley proofs, but in a shorter time.

4. If figures are included in your paper, please submit them in Postscript[®] format in addition to a hardcopy version. From the Postscript[®] format, figures are imported directly into the T_EX file. The next best option for figures is to submit them electronically in any format that is compatible with the most current version of Adobe Photoshop[®]. We can quickly convert them to Postscript[®] within Photoshop[®]. If we receive figures in a different format, it can be time consuming to convert them, sometimes with limited success requiring us to request Postscript[®] files from the author, and further delaying the publication of the paper.

5. Finally, when we send out a galley proof, we request that the author return it within 48 hours. Until we receive it back, of course, we cannot proceed.

And so, the above is an explanation as to why such discrepancies in the "Received" dates can occur within one single issue. With your help, and the tips above, hopefully your next paper will be published very quickly, indeed!

Ervin Y. Rodin

List of Contents

NUMBER 1/2

STOCHASTIC MODELS IN MATHEMATICAL BIOLOGY

- J. Gani, V. R. Haynatzka, xiii Preface
G. R. Haynatzki
and S. T. Rachev

I. METHODOLOGY

- M. A. Mugglestone, 1 Modelling and Analysing Outliers in Spatial Lattice Data
V. Barnett, R. Nirel
and D. A. Murray
- E. T. M. Ng and 11 A Comparison of Some Random Effect Models for Parameter
R. J. Cook Estimation in Recurrent Events
- D. K. Pearl, 27 High-Dimensional Simulation-Based Estimation
R. Bartoszynski,
J.-F. Maa and D. J. Horn
- D. C. Vaughan 53 Estimation and Hypothesis Testing for a Nonnormal Bivariate
and M. L. Tiku Distribution with Applications

II. MATHEMATICAL GENETICS

- D. E. Critchlow, S. Li, 69 Some Statistical Methods for Phylogenetic Trees with
K. Nourijelyani Applications to HIV Disease
and D. K. Pearl
- H.-W. Deng and Y.-X. Fu 83 Counting Mutations by Parsimony and Estimation of Mutation
Rate Variation Across Nucleotide Sites—A Simulation Study
- Y. Gusev, V. Kagansky 97 A Stochastic Model for Chromosome Segregation Errors with
and W. C. Dooley Reference to Cancer Cells

III. CELL KINETICS

- R. A. White and 113 Cell Kinetics: Mathematical Models and Experimental Bases
N. H. A. Terry
- A. Y. Yakovlev, 125 Stochastic Formulations of a Clock Model for Temporally
E. von Collani, Regulated Generation of Oligodendrocytes *in Vitro*
M. Mayer-Proschel
and M. Noble

IV. EPIDEMIC MODELS

- | | | |
|--|-----|--|
| S. Blount and S. Yakowitz | 139 | A Computational Method for the Study of Stochastic Epidemics |
| D. J. Daley, J. Gani and S. Yakowitz | 155 | An Epidemic with Individual Infectivities and Susceptibilities |
| V. R. Haynatzka, J. Gani and S. T. Rachev | 169 | The Spread of AIDS among Interactive Transmission Groups |
| G. R. Haynatzki, J. Gani and S. T. Rachev | 181 | A Steady-State Model for the Spread of HIV among Drug Users |
| H. Wu and W.-Y. Tan | 197 | Modelling the HIV Epidemic: A State-Space Approach |

V. MATHEMATICAL METHODS IN CANCER RESEARCH

- | | | |
|---|-----|---|
| E. M. Myasnikova, B. Asselain and A. Y. Yakovlev | 217 | Spline-Based Estimation of Cure Rates: An Application to the Analysis of Breast Cancer Data |
| W. Y. Tan and C. W. Chen | 229 | Assessing Effects of Changing Environment by a Multiple Pathway Model of Carcinogenesis |
| G. R. Haynatzki, K. Weron and V. R. Haynatzka | 251 | A New Statistical Model of Tumor Latency Time |

VI. MATHEMATICAL METHODS IN ENVIRONMENTAL RESEARCH

- | | | |
|---|-----|---|
| G. P. Patil, W. L. Myers, Z. Luo, G. D. Johnson and C. Taillie | 257 | Multiscale Assessment of Landscapes and Watersheds with Synoptic Multivariate Spatial Data in Environmental and Ecological Statistics |
| S. L. Sheng, N. Balakrishnan and D. Chettle | 273 | Classical and Bayesian Approaches to Compartment Models Based on <i>in vivo</i> Cadmium Data |

NUMBER 3/4

- | | | |
|-------------------------------------|-----|---|
| C. S. Ryoo | 289 | Computational Proofs of the Existence of Solutions to Elasto-Plastic Torsion Problems |
| J. Goard | 299 | New Solutions to the Bond-Pricing Equation via Lie's Classical Method |
| R. Pavani and R. Talamo | 315 | The Hyperbolic Dirichlet Problem |
| P. C. Chu and C. Fan | 323 | A Three-Point Sixth-Order Staggered Combined Compact Difference Scheme |
| I. S. Sadek and R. Vedantham | 341 | Optimal Control of Distributed Nuclear Reactors with Pointwise Controllers |

X. Wang and V. P. Roychowdhury	349	Modelling and Analysis of Communication Overhead for Parallel Matrix Algorithms
M. Cadivel, D. Goeleven and M. Shillor	381	Study of Unilateral Oscillator with Friction
A. Nagurney	393	A Multiclass, Multicriteria Traffic Network Equilibrium Model
N. Bellomo and L. Preziosi	413	Modelling and Mathematical Problems Related to Tumor Evolution and Its Interaction with the Immune System
O. Chau, L. Selmani and M. Sofonea	453	Analysis of a Quasistatic Displacement-Traction Problem for Viscoelastic Materials
A. Alhusseini and A. Ajbar	465	Mass Transfer in Supported Liquid Membranes: A Rigorous Model
L. Tadj and N. E. Rikli	481	Matrix Analytic Solution to a Quorum Queueing System
R. P. Agarwal, J. Hong and Y. Liu	493	A Class of Ergodic Solutions of Nonlinear Differential Equations and Numerical Treatment
